

Benefits for using RnR Design Adjustable Front Sight System

This sight system allows the shooter to install a standard RnR sight base on many different rifles and move a single upper being 18, 22 or 30 mm accessory thread from rifle to rifle depending preference, conditions and match requirements.

RnR Design, Inc. developed the Riles Adjustable Front Sight System with feedback from competitive shooters to provide the best solution today within the bounds of established competition rules, manufacturing technology and cost considerations. The sights are precision machined with very close tolerances allowing you to change or remove uppers without losing your zeros. All markings are clearly engraved and filled with a contrasting lacquer for easy, fast, positive and accurate adjustments. Removal of the upper during transporting of rifle eliminates possible sight damage and also eliminates an obstruction when shooting a scope. The Palma/HighBoy design has a very positive method of lockup and repeatability

“ The Riles Front Sight System has improved my ability to change uppers without losing my zero.”

RnR Design, Inc.

Adjustable Front Sight System

Why the RnR Design Adjustable Front

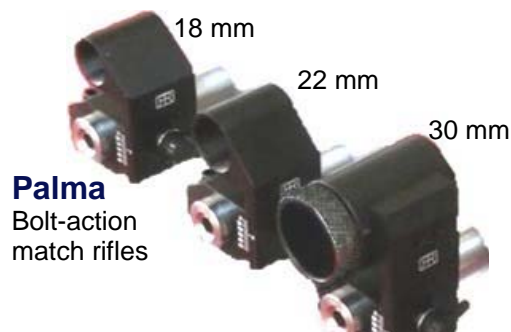

Before the Riles RnR Adjustable Front Sight System, using a standard configuration with the stepped ladder did not satisfy the needs of match shooters. The ladder design does not have the durability/repeatability of this concept. Earlier sights with both interchangeable metal and plastic inserts ruled until the introduction of the optical diopter, adjustable iris, and magnifying lens. The Riles Adjustable Front Sight System design further refined front sights for small-bore, cross course and long-range rifle competitors.

This system allows the shooter to use a scope by removing the upper part of the sight while leaving the base attached to the barrel.

Scott Riles, a seasoned match shooter and member of the US Veterans Rifle Team, has developed this sight system based on both his own requirements and the needs of the many shooters he has worked with over the years.

The Riles Adjustable Front Sight System is 4 times the strength of other sights due to improved design and selection of materials. RnR will replace, at no cost, any RnR upper piece bent or broken during normal range use and handling.

Two Different Rifle Types

Palma
Bolt-action match rifles

HighBoy
AR space gun or Tube gun type match rifles

Both sights are designed for cross course, mid and long-range target shooting with a 200 to 1000 yard range with Serration values within +/- 0.0003 of form tolerance..

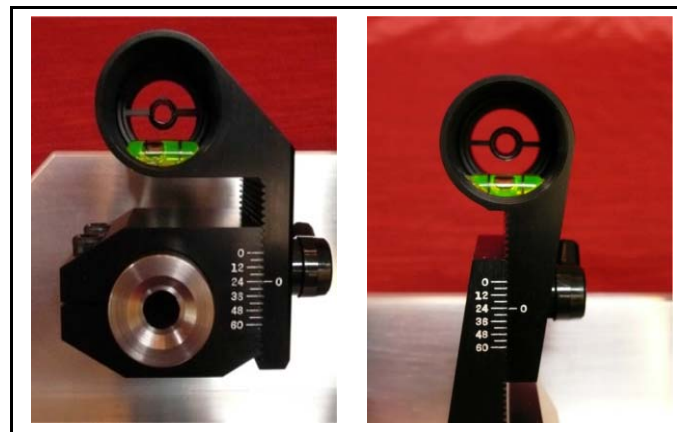

Upper piece threads of both the Palma and HighBoy units will accept standard Anschultz, Gehmann and Centra accessories.

Manufactured from aircraft strength 7075-T6511 aluminum extruded and artificially aged bar stock with basic black as the standard color.

Completely American Made

Glass Spirit Level is available for Palma and HighBoy with 22 mm thread uppers

Not available for the 18 mm uppers because of size limitations.

Ordering Information

Type of Front Site (select one)

- Palma (3 minute serrations 0.0250 inches)
- Palma (6 minute serrations 0.0500 inches)
- HighBoy (6 minute serrations 0.0500 inches)

Accessory Thread (select one)

- 18 mm
- 22 mm
- 30 mm

Yes Include a Glass Spirit Level (22 mm only for Palma or HigBoy)

Your Rifle's Barrel Tenon

Your Barrel Tenon Diameter _____ inches

Note:

- Tenon can NOT be tapered
- 0.75 to 0.875 inches in diameter standard price
- Over 0.875 to maximum of 0.900 inches—additional Charge
